salasmovilla.s@northeastern.edu | (617) 216-7611 | St. Louis, MO | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Northeastern University

MS, Game Science and Design (GPA: 3.92/4.0)

Relevant Coursework: Game AI, Spatial and Temporal Design, Mixed Research Methods, Data-Driven Player Modelling

May 2026

Boston, MA

Universidad de los Andes

BS, Computing and Software Engineering

Oct. 2017

Bogotá, Colombia

PROJECTS

Supportal Combat [[Itch](#) | [GitHub](#)] | Unreal Engine 5, C++, Blueprints, Behavior Trees

- Architected a Gameplay Ability System (GAS) framework in C++ to support 5 modular player abilities, enabling designers to add new actions without touching core combat code.
- Developed enemy AI using Behavior Trees and Environment Query System (EQS) to drive dynamic positioning.

Debt Rush [[Itch](#) | [GitHub](#)] | Unity, C#, Gameplay Systems, Dialogue Systems

- Designed and developed a dialogue system for a 2-player co-op game, supporting shared- and split-screen.
- Implemented modular item and weapon systems, defining core mechanics and supporting varied player strategies.

Smil-E-Mart [[Itch](#)] | Unity, C#, Gameplay Systems, Narrative Systems

- Built a branching narrative system across 5 in-game days, guiding player decisions through customer interactions.
- Designed an emotional interaction system enabling players to interpret and respond to customer states.

EXPERIENCE

Northeastern University

Intern – Playful Mind Lab

Mar. 2026 – Ongoing

Boston, MA

- Designing and developing interactive objects (TV, VHS, radio, coffee machine) in Unity for a VR replica of a 1980s New England home, supporting research on reminiscence therapy for older adults' mental wellbeing.

Dassault Systèmes – SOLIDWORKS

Internship – Installation, licensing and tools software engineer

Jun. 2025 – Aug. 2025

Waltham, MA

- Designed and implemented a reusable modular UI system for an early-stage internal application using C#, WPF, and MVVM, improving maintainability and enabling scalable feature development.
- Collaborated with engineers to research and prototype internal tools, translating product requirements into functional software systems within a Windows development environment.

Globant - Electronic Arts (EA) [[EA App](#)]

C++ Developer

Dec. 2021 – Aug. 2024

Bogotá, Colombia

- Designed and implemented C++ modules for secure authentication and data sharing between the EA App and Steam and Microsoft Apps, reducing cross-platform login and account linking issues by 25%.
- Built C++ telemetry modules that collect real-time metrics from distributed services and visualized with Kibana and Grafana dashboards to help engineers resolve 90% of issues within 30 minutes.

Bizagi Latam

Technical Leader | Software Engineer – Cloud Infrastructure Team

Mar. 2018 – Dec. 2021

Bogotá, Colombia

- Led a 4-person team to deploy Bizagi products across Azure environments for clients, completing 100% of deployments over a 6-month period maintaining SLA compliance with no critical post-deployment incidents.
- Automated Azure infrastructure setup for Bizagi deployments, cutting manual provisioning time by 70%.

SKILLS

Game Dev: Unity, Unreal Engine, Blueprints, Behavior Trees, Environment Query System

Languages: C#, C++, .NET, Python, SQL, R

Technologies: Visual Studio, Git, Perforce, Microsoft Azure, Blender, Tableau, Data Visualization, Kibana, Grafana

Soft Skills: Agile, Scrum, Technical Leadership, Emotional Intelligence
